Making Advanced Cancer Care More Convenient

Since its establishment in 2007, the Steeplechase Cancer Center at Robert Wood Johnson University Hospital (RWJUH) Somerset, an RWJBarnabas Health (RWJBH) facility, has had one primary goal in mind: to make cancer care more convenient for patients by offering world-class services close to home. Over the past year, we have continued to build on this goal through an array of expanded offerings and our partnership with Rutgers Cancer Institute of New Jersey, the state's only National Cancer Institute-Designated Comprehensive Cancer Center. This means a strong focus on specialty care access, opportunities to participate in groundbreaking clinical trials and an enhanced patient experience.

As part of these efforts, the Steeplechase Cancer Center opened an outpatient medical oncology suite designed with patient comfort and convenience in mind. The new facility has doubled our infusion capacity, doubled the waiting room size, added patient rooms and designated space for scalp cooling therapy. From provider appointments to infusion and radiation treatments, our patients now have all the medical oncology services they need under one roof.

The addition of a second da Vinci Xi robotic surgical system has broadened our robotic surgery capabilities, including those for urologic and gynecologic cancers. A new TrueBeam™ linear accelerator in our Radiation Oncology Department synchronizes imaging, patient positioning and movement management to offer exceptional precision in treating various types of cancer. We also continue to expand our interdisciplinary team of clinicians in specialty care areas.

Our team members are compassionate, highly skilled and dedicated to ongoing professional education in the latest evidence-based care practices.

Over the past year, we have strengthened our focus on the holistic needs of our patients by surveying their preferences, introducing new supportive care options and returning to in-person programming. In addition to full-time social work support, we now offer Chair Yoga, an Exploring Nature class and a Relaxation and Deep Breathing class. We welcome patients who are recently diagnosed, in treatment or post-treatment for supportive care programs, along with their families.

In the coming months, we plan to further broaden services with initiatives such as a survivorship clinic and a new Patient Relaxation Room. We'll also continue to expand specialty expertise in areas such as urologic oncology and gastrointestinal services. We are grateful for the ongoing support of our community, team members, physicians and volunteers in making our progress possible.

Through our partnership with RWJBH and Rutgers Cancer Institute and our integrated network of comprehensive care, we are honored to be part of an initiative designed to transform cancer prevention, diagnosis and treatment in New Jersey and beyond. We intend to change the face of cancer by creating healthier, brighter futures for patients, families and communities, and we are excited to see what the future holds.

Breast Center Receives NAPBC Reaccreditation

RWJUH Somerset's Sanofi US Breast Care Program earned three-year reaccreditation from the National Accreditation Program for Breast Centers (NAPBC), a program administered by the American College of Surgeons. In addition to an onsite visit, a surveyor virtually attended the Steeplechase Cancer Center's multidisciplinary breast cancer committee meeting. Reaccreditation through this voluntary survey demonstrates an ongoing commitment to providing the highest quality care in breast cancer treatment.

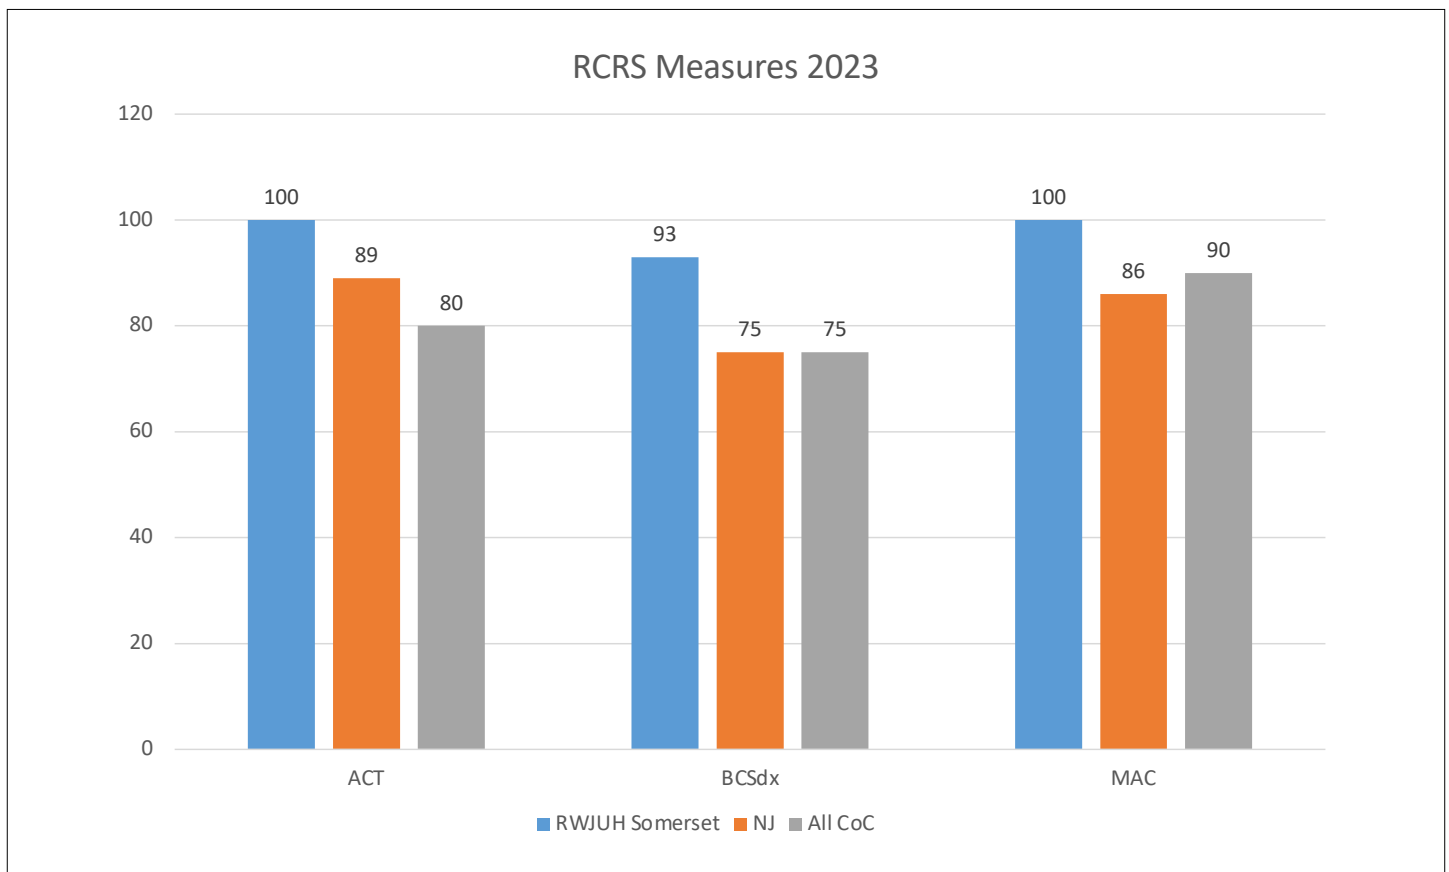

EXEMPLARY QUALITY MEASURES

Quality Measures

As one of approximately 1,500 cancer programs accredited by the Commission on Cancer (CoC) of the American College of Surgeons, the Steeplechase Cancer Center is dedicated to continuously improving outcomes for patients with cancer and is required to submit data that compares quality-related performance measures with aggregated CoC-accredited programs. The CoC's National Cancer Database uses Rapid Cancer Reporting System (RCRS) tools for data submission.

Compared to other cancer programs in New Jersey and across the U.S., the Steeplechase Cancer Center exceeded performance standards for the following RCRS measures. This data is shown below.

Explanation of measures:

ACT: Adjuvant chemotherapy is recommended or administered within 4 months (120 days) of diagnosis for patients under age 80 with AJCC Stage III (lymph node positive) colon cancer.

BCSdx: First therapeutic breast surgery in a non-neoadjuvant setting is performed within 60 days of diagnosis for patients with AJCC clinical stage I-III breast cancer.

MAC: Combination chemotherapy or chemo-immunotherapy (if HER2 positive) is recommended or administered within 4 months (120 days) of diagnosis for women under 70 with AJCC T1cNOMO, or stage IB - III hormone receptor negative breast cancer.

COMMUNITY OUTREACH AND SCREENINGS

Robust Outreach

In 2023, RWJUH Somerset's Community Health Department reached nearly **46,000** people through more than **530** programs focused on cancer prevention and awareness.

Breast Cancer Awareness Initiatives

The Somerset County Commissioners presented a proclamation to RWJUH Somerset in recognition of Breast Cancer Awareness Month that honored efforts to promote early detection and offer comprehensive treatment options for the community. These outreach initiatives included the following:

- RWJUH Somerset's Community Health Department conducted strategic outreach to Black women on the importance of scheduling annual mammograms. More than 400 calls were placed, with 40 women scheduling mammograms.
- The Community Health Department held its annual Breast Cancer Awareness Month event, "Harvesting Health and Produce Consumption," at Bridgewater Manor. Renowned TV fruit and vegetable expert "Produce Pete" Napolitano shared tips for selecting and preparing healthy dishes. He was joined by award-winning writer Susan Bloom, co-author of his book, and breast surgeon Deborah Lue, MD, medical director of breast cancer services at the Steeplechase Cancer Center, who discussed breast cancer risk factors, prevention strategies and treatment advances. About 120 people attended the event, which featured dinner, healthy recipes and a book signing.
- The Steeplechase Cancer Center and Community Health Department held a special "It's a Pink Party" luncheon attended by about 40 women in pink attire, pictured right. Focusing on breast health and the importance of mammograms, the program was led by Kimberly Cromwell-Piniella, RN, breast cancer patient navigator, and Diane Quigley, RT, director of the Sanofi US Breast Center.
- Through a sponsorship by RWJUH Somerset, six Somerset County police vehicles were wrapped in pink and used throughout October to promote breast cancer awareness.
- In collaboration with the Downtown Somerville Alliance, drink coasters reminding women to get their annual mammogram were distributed to Somerville restaurants.

"Produce Pete", pictured middle, at "Harvesting Health and Produce Consumption" annual Breast Cancer Awareness Month event.

"We're committed to educating our community about breast cancer and giving women the tools they need to take charge of their breast health."

- Deborah Lue, MD

Attendees at "It's a Pink Party" luncheon.

Prostate Cancer Awareness Luncheon

As part of the hospital's efforts to address cancer disparities in the Black community, RWJUH Somerset partnered with First Baptist Church in Somerset to hold a Prostate Cancer Awareness Luncheon attended by 40 men. Medical oncologist Eshan Patel, MD, provided information about prostate cancer and prevention, and attendees were encouraged to sign up for a free prostate cancer screening at the Steeplechase Cancer Center.

Cancer Screenings Target Underserved Populations

Various cancer screenings were facilitated by the Community Health Department in 2023, with a particular focus on underserved populations. Two prostate cancer screenings were held in September in conjunction with Prostate Cancer Awareness Month. Nearly 100 men received a PSA screening and an exam by a urologist, with 13 abnormal PSAs detected and referred for follow up. Through a partnership with ScreenNJ, 14 uninsured individuals received free colonoscopies, with one subsequently undergoing lifesaving surgery to treat colon cancer. In addition, 52 people were screened for skin cancer, with 29 referred for follow up.

Educational Outreach on Lung Cancer

With the help of Lung Cancer Screening Program Manager Kaidlan Ricardo, CMA, BS-HA, and the Community Health Department, RWJUH Somerset raised awareness about lung cancer prevention and early detection through low-dose CT screening. Efforts included ten educational programs, outreach to 25 Somerset County physician practices, an RWJUH Somerset Grand Rounds presentation and a feature on the RWJBH HealthTalk show on Piscataway Community TV. In addition, Lung Cancer Awareness Month events at the hospital included the second annual Wear White Day and a Great American Smokeout table featuring smoking cessation resources.

Physician Panel Converses About Cancer

RWJUH Somerset physicians shared their expertise during a “Cancer in the Community” panel discussion in November at the Steeplechase Cancer Center as part of an RWJBH initiative on Advancing Cancer Care for a Healthier Tomorrow. Panelists included radiation oncologist Joel Braver, MD, breast surgeon Deborah Lue, MD, medical oncologist Eshan Patel, MD and Steeplechase Cancer Center medical director Kathleen Toomey, MD. Hosted by Somerset Health Care Foundation and attended by donors and community members, the event focused on the many benefits of RWJBH's partnership with Rutgers Cancer Institute of New Jersey, such as access to specialists and clinical trials.

Golf Association Event Features Cancer Insight

The Community Health Department held a special program on “Turning Setbacks Into Comebacks” in June at the United States Golf Association in Liberty Corner. Speakers included Kathleen Toomey, MD, medical director of the Steeplechase Cancer Center, and two cancer survivors who shared inspirational stories.

NEW PROGRAMS, TECHNOLOGY AND EXPERTISE

Expanded Medical Oncology Services

Through funding from the Somerset Health Care Foundation, the Steeplechase Cancer Center opened a newly renovated outpatient office suite to expand medical oncology and infusion services, enhance the patient experience and position the center for continued growth. The renovated space focuses on patient comfort and convenience by increasing the size and number of exam rooms and doubling the size of the waiting room to ensure better patient flow.

Infusion capacity for services such as chemotherapy and immunotherapy has also doubled, with chairs to accommodate 18 patients. In addition, the office features a dedicated space for patients who are receiving scalp cooling therapy to help prevent hair loss.

“Our interdisciplinary team members helped us plan this space with optimized patient care in mind,” says Kerstin Scheper, DNP, RN, OCN, GERO-BC, NE-BC, assistant vice president of Oncology Services. “By integrating a streamlined workflow with comfort and convenience, we’re able to better meet the needs of our community.”

Jan Yu, RN, BSN, OCN with patient in Infusion Suite 2500.

Cutting-Edge Radiation Oncology Technology

A new TrueBeam™ linear accelerator has been installed and is now delivering treatment in the Radiation Oncology Department at the Steeplechase Cancer Center. This technology synchronizes imaging, patient positioning and movement management and allows state-of-the-art precision therapy for patients who require radiation treatments.

TrueBeam effectively treats tumors that move during treatment as the patient breathes in and out. It may be used for all forms of advanced external beam radiation, including stereotactic radiosurgery, stereotactic body radiation therapy, intensity-modulated radiation therapy, image-guided radiation therapy and RapidArc® radiotherapy. With its High Intensity Mode, TrueBeam can deliver high doses of radiation more than twice as fast as earlier technology. In addition, precision is measured in increments of less than a millimeter.

“This system enables us to quickly and precisely treat many forms of cancer with the radiation therapy modality that’s best for each patient,” says radiation oncologist Joel Braver, MD. “Reducing the number of steps needed for imaging, positioning and treatment means shorter treatments with greater comfort and convenience. TrueBeam also performs accuracy checks every ten milliseconds, targeting the cancer cells while greatly minimizing the risk of impacting healthy tissue.”

Additional Robotic Surgical Technology

RWJUH Somerset has expanded robotic surgery capabilities and increased the efficiency of minimally invasive surgery with the addition of a second da Vinci Xi robotic surgical system. Robotic surgeries offered at RWJUH Somerset include general, urologic, gynecologic and gender affirmation surgeries. With the additional technology, the surgical team can accommodate two simultaneous robotic cases, decreasing patient wait times for surgery. The technology increased the number of robotic surgeries performed during 2023 and attracted new surgeons to the medical staff.

Gynecologic oncologist Ruth Stephenson, DO and Robotic Surgery Team with new da Vinci Xi robot surgical system.

Oncology Practice and Research Summit

RWJBH and Rutgers Cancer Institute of New Jersey held its Third Annual Oncology Clinical Practice and Research Summit in November at the Hyatt Regency of New Brunswick. Kathleen Toomey, MD, medical director of the Steeplechase Cancer Center, served on the planning committee and contributed to the program’s development. More than 200 professionals attended the event, which leveraged expertise across RWJBH while highlighting cancer innovations.

Continuing Education and Certification Opportunities

Steeplechase Cancer Center team members are committed to pursuing ongoing professional education opportunities. In 2023, oncology pharmacists (pictured left to right) Isabel Caratenuto, PharmD, and Jigisha Patel, PharmD, attended the 65th American Society of Hematology (ASH) Annual Meeting and Exposition in San Diego through funding from Somerset Health Care Foundation.

Through additional funding from the Foundation, two Steeplechase Cancer Center advanced practice nurses — Darya Olekhovich, APN, and Simona Schneider, APN — are completing a new certification program recently launched by the American Society of Breast Surgeons. The seven-month program includes lectures and videos provided by renowned physicians from across the country, with topics designed to advance APN knowledge and care practice in surgical oncology.

Oncology pharmacists attend the American Society of Hematology Annual Meeting.

Expanding Specialty Services

Patient access to specialty services expanded in 2023 with the addition of new physicians and surgeons. The Steeplechase Cancer Center welcomed Shirly Solouki, MD, urogynecology surgeon, who treats patients with gynecological, bladder, and pelvic floor disorders. Eugenia Girda, MD, gynecological oncologist, and Katherine Shapiro, MD, urologist and specialist in female pelvic medicine and reconstructive surgery also joined the RWJUH Somerset medical staff. These new physicians, along with Ruth Stephenson, D.O., a Gynecological Oncology who specializes in ovarian, endometrial, cervical and vulvar cancers, provide patients with a full range of Women’s Health services. In addition, surgical endocrinology services are now available at RWJUH Somerset with the addition of Amanda Laird, MD, and Toni Beninato, MD.

CLINICAL RESEARCH ADVANCES CANCER CARE

Clinical Trial Enrollment

Patients throughout the region have access to a broad range of clinical trials available through RWJUH Somerset's partnership with Rutgers Cancer Institute of New Jersey, the state's only NCI-Designated Comprehensive Cancer Center. RWJUH Somerset currently participates in 35 of Rutgers Cancer Institute's 200 clinical trials, including those for breast, lung, gynecologic, gastrointestinal and genitourinary cancers. These trials offer access to cutting-edge treatments and protocols while shaping optimal care for patients who will face similar issues in the future.

In 2023, 134 patients were enrolled in clinical trials at RWJUH Somerset, including 42 in treatment trials and 92 in the men's prostate cancer screening trial. This represented a 13.5% increase in the number of patients enrolled compared to the prior year.

“Teamwork and engagement across disciplines means that patients understand their options and opportunities, which contributes to our robust clinical trial accrual. We're committed to providing patients with all the resources they need to make informed decisions about their care.”

Spotlight on Clinical Trials

Principal investigator-initiated research protocols on preoperative radiation boosts in breast cancer patients and alternating treatment plans for head and neck cancer patients were the two highest accruing clinical trials at the Steeplechase Cancer Center in 2023.

Preoperative Radiation Boost in Breast Cancer Patients

This Phase II, single-arm clinical trial is evaluating the delivery of a radiation boost prior to surgery in non-metastatic, node-negative breast cancer patients who are eligible for breast-conserving surgery. The standard of care is to deliver radiation treatment to the whole breast after surgery followed by a radiation boost to the tumor bed, so this study changes the order of the radiation boost.

Researchers are examining a pre-surgical radiation boost because the tumor can be better visualized and targeted prior to surgery while minimizing radiation to normal breast tissue. As part of this study, researchers are assessing the acute wound complication rate, cosmetic outcome, tumor control, tumor histopathology and whether this radiation schedule improves the patient experience.

Alternating Treatment Plans for Patients with Advanced Thoracic/Head and Neck Cancers (ATATcH)

Combining chemotherapy with immunotherapy is an FDA-approved standard treatment approach for patients with advanced lung cancers or head and neck cancers. This pilot Phase II study is evaluating a novel schedule of alternating cycles of chemoimmunotherapy (chemotherapy plus pembrolizumab) with immunotherapy alone (pembrolizumab) during the induction phase of treatment, resulting in less frequent use of chemotherapy (once every six weeks instead of the usual every three weeks during induction).

The three arms of the study include adult patients with squamous lung cancer, non-squamous lung cancer, and head and neck squamous cell carcinoma. Researchers expect that less frequent exposure to chemotherapy in this setting will control cancer effectively while preserving quality of life.

Multifaceted Care for the Cancer Journey

When Laura Hernandez experienced rectal bleeding one morning in August 2022, her providers initially thought the issue might be hemorrhoids or colitis. But after a colonoscopy, the 61-year-old Carteret resident was stunned to learn she had rectal cancer.

Her primary care provider, whom she trusts implicitly, recommended that she see Steeplechase Cancer Center colorectal surgeon Brendan Scully, MD.

“I knew that I found the right place for my treatment,” says Laura. “Dr. Scully was very honest in outlining everything from my diagnosis to my care options, which included radiation and chemotherapy — and surgery only if needed.”

A Promising New Treatment Regimen

After considering her options, Laura enrolled in the Rutgers Cancer Institute of New Jersey Crafter clinical trial at RWJUH Somerset. This treatment regimen was similar to her recommended care plan but added another powerful chemotherapy medicine, with the goal of determining if it was a more effective approach.

“If my experience can help someone else in the future, I’m all in,” says Laura, who was familiar with the benefits of clinical trials from a prior role in the health field.

Laura Hernandez

Under the structure of the clinical trial and the care of radiation oncologist Laura Bond, MD, and medical oncologist Eshan Patel, MD, Laura underwent a 28-day course of radiation therapy paired with oral chemotherapy. Surprisingly, she had no side effects and continued to work from home during her treatment.

“I followed some great advice from oncology dietitian Karen Connelly on what to eat and what to avoid, and I think that really helped,” adds Laura.

Her treatment continued with FOLFOXIRI (IV chemotherapy) given every two weeks for eight cycles in the new infusion center. She again tolerated treatment very well, and she appreciated having access to free transportation services as part of the Steeplechase Cancer Center’s patient assistance fund.

“Through clinical trials, our patients have access to promising new ways to treat cancer,” says Dr. Patel. “Plus, they have an interdisciplinary team behind them every step of the way.”

Although Laura’s imaging scans were clear after treatment, subsequent testing detected a recurrence and she chose to move forward with robotic surgery. While removing the cancer required a colostomy, she knows she made the right decision.

Now, she’s looking forward to spending time at the beach and celebrating her upcoming 40th anniversary with her husband, Sergio, who provided invaluable support in addition to her Steeplechase Cancer Center team.

“I can’t say enough about the care I received in every single aspect – in fact, I would recommend anyone in my family for care here, and that speaks volumes,” adds Laura. “I’m so happy to say that I’m still me, and I’m going to be OK.”

Laura Hernandez visits the Sanofi US Wellness Boutique.

SUPPORT AND SURVIVORSHIP

Patients and their caregivers participate in Chair Yoga.

Laura DePrado, B.S., HTR leads Horticulture class for patients and their caregivers.

Expanded Social Work and Support Options

Support services expanded at the Steeplechase Cancer Center with the addition of a full-time social worker. Social work services include assisting patients with referrals to behavioral health resources and helping them navigate social service options such as disability and family leave. The social work team also collaborated with Cancer Center administration manager Patricia Halicki to survey patients on their support program preferences and expand offerings accordingly.

As a result, patients and team members welcomed a return to in-person support services, including well-attended Women's and Men's Cancer Support Groups. In-person exercise programs include a new Chair Yoga class and a Wellness Workout class, which also still features virtual sessions. A new class on Exploring Nature from the Ground Up engages participants in monthly activities such as planting herbs, designing bouquets and creating lavender sachets to nurture well-being. In addition, a new monthly Relaxation and Deep Breathing class helps patients calm the mind through guided imagery and deep breathing techniques.

"Feedback has been very positive and attendance is steadily increasing for our programs," says Halicki. "The return to in-person options has been wonderful, as it helps build cohesiveness in a common space for those who share a similar journey."

2023 Support by the Numbers

- More than **975** patients received customized assistance from the Sanofi US Wellness Boutique for supportive items such as prosthetics, wigs and lymphedema garments.
- Patients received nearly **\$83,000** in financial assistance toward groceries, utility bills, medication and Sanofi US Wellness Boutique items.*
- Patients accessed free Uber Health transportation services totaling nearly **\$40,000**.*
- **30** patients used Paxman Scalp Cooling technology to help prevent hair loss.
- Oncology nurse navigators had **9,142** patient encounters.
- **186** patients received genetic counseling.
- **332** patients were referred for oncology social work services.
- **551** patients received nutrition consultations from the oncology dietitian.
- **113** patients received financial advocacy assistance saving them **\$92,599** in co-pays. Financial advocates also helped **243** patients avoid high out-of-pocket costs through pharmaceutical assistance programs.
- Cancer support groups had **262** patient encounters.
- The Wellness Workout program had **1,164** patient encounters.

*Financial assistance and transportation are made possible through a patient assistance fund generously supported by donors to Somerset Health Care Foundation. Patients can receive Paxman Scalp Cooling technology free of charge when not covered by insurance thanks to the patient assistance fund.

Team Jonathan participates in 15th Annual Steeplechase Distance Run.

Steeplechase Distance Run Celebrates 15 Years

Coordinated by Somerset Health Care Foundation, the 15th annual Steeplechase Distance Run raised \$84,000 to benefit educational and support programs and the patient assistance fund at the Steeplechase Cancer Center. Despite the rainy September weather, about 400 runners and walkers participated in person in the 10K and 5K runs and 2-mile walk in Hillsborough. Another 200 participated virtually by running, walking, biking or swimming on their own.

The Steeplechase Distance Run was founded by Cynthia Lee, MD, a fellowship-trained breast surgeon at RWJUH Somerset and part of the RWJBH Medical Group. Platinum sponsors for 2023 included Colin L. Failey, MD, FACS, and Gilead Oncology.

Cynthia Lee, MD, breast surgeon and founder of Steeplechase Distance Run.

Spreading Holiday Joy

Somerset County Prosecutor John McDonald and the Somerset County Prosecutor's Office Detectives/Policemen Benevolent Association's Local 307 sponsored an annual holiday celebration for children and grandchildren of patients at the Steeplechase Cancer Center. Representatives from the Far Hills Country Day School also attended to help brighten the holidays for 14 patients and their families.

Families visit with Santa.

Zaiser, Head of School, Far Hills Day School; Deirdre Blaus, Vice President of Operations; Prosecutor John P. McDonald, Somerset County Prosecutor's Office; Kathleen Toomey, MD, Medical Director, Steeplechase Cancer Center and Deputy Chief Meredith McKay.

Clinical Cancer Services

The Steeplechase Cancer Center offers a broad range of clinical services, including:

- Clinical trials
- Diagnostic services, including 3D mammography and the Lung Cancer Screening Program
- Genetic counseling
- Infusion therapy
- Laboratory services
- Medical oncology
- Oncology rehabilitation services
- Pathology
- Plastic and reconstructive surgery
- Radiation therapy
- Radiology, including PET/CT
- Surgical oncology, including minimally invasive and robotic techniques

Cancer Support Services

The Steeplechase Cancer Center's support services include:

- Exercise Programs
- Horticulture Therapy
- Patient Cancer Support Groups
- Patient Relaxation Room
- Sanofi US Wellness Boutique
- Social Work Services
- Survivorship Programs
